About Me

I am Muhammad Irsyad students at Asia Cyber University majoring in Informatics with a keen interest in pursuing a career in IT and have a strong interest in various IT areas. While I have a background in programming, I am eager to explore new and opportunities that align more closely with my evolving interests and aspirations. My journey in programming has provided me with valuable insights and skills in software development, problem-solving, and critical thinking. However, I have come to realize that my true passion lies in exploring broader fields within IT and delving into areas that offer diverse challenges and opportunities for growth.

Education

Asia Cyber University   **2023 – (Now)**
Informatics Engineering

SMKN 7 JAKARTA   **2020 – 2023**
Graphic Production

Experience

Zolog | FullStack Developer Intern   **November 2023 – (Now)**
- Using adonis js for backend language
- Using postgres for database and dbeaver for manage database
- Using waterfall development lifecycle with Trello
- Using laragon to run webserver and coding with php
- Using thunder client to testing API

Projects

Configuration of Access Points for TNI AD | Sitel   **April 2024 – April 2024**
- Responsible for configuring the settings of access points (AP) according to the needs and specifications of TNI AD.
- Conducted testing to ensure the quality and reliability of the network after the AP configurations were completed.
- Measured the network performance post-implementation of AP configurations to ensure the project objectives were achieved.

Zolog | Fullstack Dev   **November 2023 – March 2024**

- Contributed to fixing UI bugs within the master data feature, ensuring a consistent and smooth user experience.
- Responsible for designing and implementing layout compositions within the master data feature, ensuring aesthetic and functional displays.
- Developed API routes to facilitate interaction between the frontend and backend systems, ensuring efficient and secure data communication.
- Conducted comprehensive API testing to verify system reliability and security.
- Designed and implemented audit features within the master data feature, enabling data change tracking for auditing and monitoring purposes.

Zaacounting | Fullstack Dev   **November 2023 – March 2024**

- Implemented hooks for frontend and backend, enabling integration between application components.
- Contributed to the creation of user-centric master data features, enabling structured data management.
- Participated in developing master data features for roles, allowing user role customization and data access.
- Contributed to the creation of APIs for tax-related master data features, facilitating effective tax management and reporting.

Bookshelf API | Backend Developer (Dicoding Academy)   **October 2023 – October 2023**

- Created Bookshelf API using Node.js and Express.js
- Basic functions for saving, displaying, changing and deleting book information
- Using ESM (ES Modules) for import and export functions file
- Use Express.js as a framework to build API
- Uses nanoid to generate unique id

Achievement & certification

- Certificate Software Engineer for Beginners by RevoU
- Certificate Networking Basics by Cisco
- Certificate Networking Device and Initial Configuration by Cisco
- Certificate DevOps for Beginners by aws dicoding
- Certificate Computer Network for Beginners by aws dicoding
- Certificate Cloud Practitioner Essentials for Beginners by aws dicoding
- Certificate JavaScript for Beginners by aws dicoding
- Certificate Back-End Applications for Beginners by aws dicoding

Skills & abilities

- Teamwork
- Time management
- Problem solving
- Analysis
- Interpersonal
- Quick Learner
